1. Executive Summary

Read AI wins on breadth and loses on trust, so the MVP should match its core value and compete on consent. Read AI serves more than 5 million monthly users with summaries, transcripts and search across meetings, email and chat, yet holds a 1.3/5 Trustpilot score driven almost entirely by bots that auto-join meetings and spread without permission.

1.1 Research Findings

Read AI's unique selling points are cross-channel search, broad platform coverage, coaching analytics and the new Ada agent. Its weak points are intrusive auto-join behaviour, difficult account removal, video playback locked to the $22.50 tier, and slow support.

1.2 Market Opportunity

No major player combines cross-channel coverage with consent-first controls at an entry-level price.

1.3 Proposed Product

Brevio (working name) is positioned as “the AI meeting assistant that asks first”. It offers summaries, transcripts, playback and highlights, Ask Brevio search and a Daily Brief, with host approval and one-click attendee opt-out. The Pro plan at $12 per user per month (annual) includes video playback.

1.4 Landing Page

A ten-section responsive landing page (hero, features, consent controls, use cases, testimonials, pricing, FAQ and contact form) was designed and built in Webflow using native elements and a native Webflow form.

2. Read AI Overview

Read AI has grown from a meeting notetaker into a cross-channel “productivity AI” that sits across meetings, email and chat. Its tagline is “Meetings In, Decisions Out”.

2.1 Company Profile

Attribute	Detail
Positioning	Platform-agnostic AI copilot across meetings, email and messages
Scale	5M+ monthly active users
Funding	About $81M raised, including a $50M Series B in October 2024 at a reported ~$450M valuation
Platforms	Web, Chrome extension, Windows, macOS, iOS, Android
Meeting tools	Zoom, Google Meet, Microsoft Teams, Webex
Compliance	SOC 2 Type 2, GDPR, HIPAA (Enterprise+); no training on user data by default
Notable customers	Zoom, HubSpot, University of Michigan, USC, Tulane
Latest launch	Ada, a free “digital twin” email assistant, announced 25 February 2026

Table 1: Read AI company profile

2.2 Strategic Direction

The meeting is the wedge, but the moat Read AI is building is a searchable knowledge layer over all of a user's work communication. The launch of Ada shows the company moving from summarising work to acting on it.

3. Feature Analysis

Read AI's features fall into five layers: capture, understand, search, act and connect. Table 2 maps each feature to the user benefit it delivers.

3.1 Feature Breakdown

Layer	Feature	What it does	User benefit
Capture	Meeting bot + Assistant	Joins Zoom, Meet, Teams and Webex; desktop and mobile capture; file uploads	No manual note-taking
Understand	Meeting Reports	Summary, chapters, action items, key questions, transcript	A 60-minute call digested in 2 minutes
Understand	Playback + Highlights	Video replay with AI-cut highlight clips (Enterprise tier)	Catch up asynchronously
Understand	Speaker Coach	Talk-time, filler words, engagement and sentiment metrics	Better meeting behaviour over time
Understand	Email and message summaries	Digests of Gmail, Outlook, Slack and Teams threads	Inbox triage in minutes
Search	Ask Read / Search Copilot	Q&A across meetings, email and chat with citations	Institutional memory on demand
Act	Action-item routing	Pushes tasks to Asana, Jira, Notion, Linear and CRM	Follow-ups actually happen
Act	Ada digital twin	CC ada@read.ai to schedule meetings and draft answers	Hours of coordination removed
Connect	20+ integrations, MCP server	Salesforce, HubSpot, Confluence, Zapier, ChatGPT, Claude	Fits the existing stack

Table 2: Read AI feature breakdown

3.2 User Experience

The experience is designed to be zero-effort: a user connects a calendar once and reports arrive by email and in-app after every meeting. That frictionless default drives adoption, but it is also the root of the biggest complaints, as Section 5 shows.

4. Unique Selling Points and Pricing

Read AI's edge is breadth: it is one of the few tools that summarises meetings, email and chat in one place and lets users search across all three.

4.1 Unique Selling Points

1. **Cross-channel intelligence.** Meetings, email and messages in one searchable layer, where most rivals stop at meetings.
2. **Platform-agnostic.** Works across Zoom, Meet, Teams and Webex, so mixed-tool companies need one product.
3. **Speaker Coach and engagement analytics.** Sentiment and talk-time metrics that pure notetakers lack.
4. **Agentic layer.** Ada turns stored context into action (scheduling, drafted replies), free for all users.
5. **Enterprise trust signals.** SOC 2 Type 2, GDPR and HIPAA, plus no training on customer data by default.

4.2 Pricing Structure

Plan	Annual billing	Monthly billing	What it unlocks
Free	$0	$0	5 meetings/month, summaries, search, coach
Pro	$15.00	$19.75	Unlimited meetings, premium integrations, 100 file credits
Enterprise	$22.50	$29.75	Audio/video playback, highlights, 200 file credits
Enterprise+	$29.75	$39.75	HIPAA, SAML/SCIM, custom retention; 5-seat minimum

Table 3: Read AI pricing per user per month (USD)

4.3 Pricing Implications

Video playback, a core part of the “transcripts, playback and highlights” promise, sits behind the $22.50 tier, and advanced security controls sit behind the top tier. Both are gating points a new product can attack.

5. Customer Review Analysis

Users who chose Read AI value its output; people who never chose it resent the bot. The product scores well on capability and poorly on consent, which is the clearest opening for a new entrant.

5.1 Review Sources

Source	Signal
Trustpilot	TrustScore 1.3/5 from 109 reviews; 90% are 1-star, dominated by “spam-like” auto-joining and hard-to-delete accounts
G2	4.0/5 from 43 reviews (29 five-star, 4 one-star). Praise for transcript accuracy, ease of use and rich reports; complaints about auto-join, integration gaps and slow support
Capterra	Listed with 0 user reviews (listing updated 28 September 2026)
AI Meeting Assistant Reviews	3.5/5 overall; 5/5 for AI analysis and knowledge connection, 3/5 privacy, 1/5 offline
University IT desks (e.g. UW-Madison)	Publish removal guides because viewing a shared report can create an account that then joins future meetings

Table 4: Summary of review sources

5.2 Strengths

- Accurate transcripts and well-structured summaries with action items and key questions.
- Setup takes minutes, and reports arrive automatically by email.
- Works across Zoom, Meet and Teams, so one tool covers every call.
- Cross-meeting search and Q&A save time hunting for decisions.

5.3 Weaknesses and Improvement Areas

- **Consent and control.** Auto-join by default and viral account creation feel intrusive.
- **Hard to leave.** Users report difficulty fully removing the bot or deleting accounts.
- **Paywalled playback.** Video replay requires the $22.50 Enterprise tier.
- **Analytics misreads.** Sentiment scoring can misread humour or silence as low engagement; summaries vary with accents.
- **Support.** Slow or unresponsive support is a recurring theme.

5.4 Key Insight

Users who chose Read AI rate it well (4.0 on G2), while people exposed to it without choosing it rate it 1.3 (Trustpilot). Fathom has 7,079 G2 reviews against Read AI's 43, and Capterra lists none, which shows how little public advocacy Read AI has despite its scale.

6. Competitive Landscape

The category has converged on $10–$16 per user per month for unlimited meeting notes. Read AI is the broadest product but not the cheapest, and it is the only major player whose brand carries a consent problem.

6.1 Competitor Comparison

Product	Entry paid plan (annual)	Free tier	Capture method	Distinctive strength
Read AI	$15.00	5 meetings/month	Bot joins call	Meetings + email + chat search; Ada agent
Otter.ai	$8.33	300 minutes/month	Bot joins call	Live transcription, low price
Fireflies.ai	$10.00	Limited storage and AI credits	Bot joins call	CRM and workflow integrations
Fathom	$16.00 (Premium)	Unlimited recordings	Bot joins call	Generous free plan, clips
Granola	$14.00 (Business)	30-day history	Bot-free device audio	Discreet, notepad-style UX

Table 5: Competitor comparison, price per user per month (USD)

6.2 Market Patterns

- **Bot-free capture is rising.** Granola's device-audio approach is the fastest-growing answer to consent fatigue.
- **An unclaimed bundle.** No competitor combines video playback, cross-channel search and strong privacy controls at an entry price.

7. Opportunity and MVP Positioning

The gap is a product with Read AI's breadth and none of its intrusiveness. The MVP, working name **Brevio**, is positioned as “the AI meeting assistant that asks first”.

7.1 Positioning Map

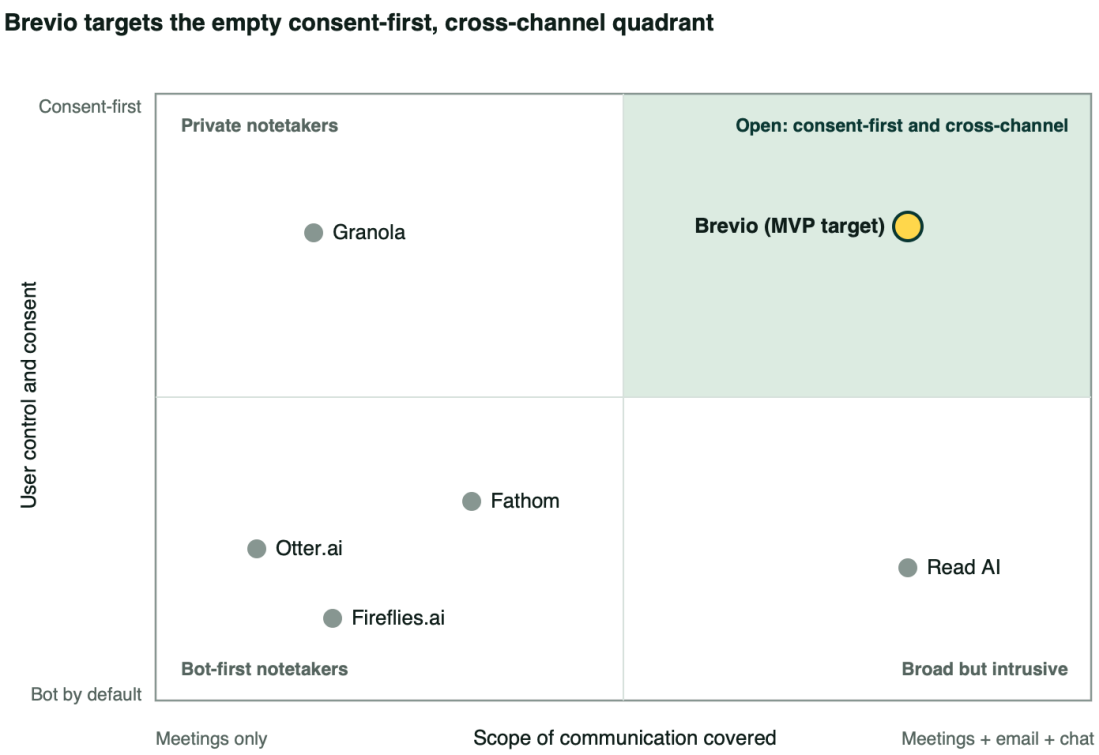

Figure 1: Positioning map, scope of communication vs. user control

Placements reflect each product's default capture method and channel coverage from the research above. Granola is bot-free, and Read AI is the only broad player.

7.2 Differentiation Strategy

1. **Consent-first by design.** Brevio never auto-joins without the host's approval, announces itself, offers one-click opt-out to every attendee, and never creates accounts for people who only view a shared report.
2. **Bot or no bot.** Users choose between a visible bot or bot-free desktop capture for each meeting.
3. **Playback included.** Transcripts, video playback and highlight clips ship in the entry paid plan, not an enterprise tier.
4. **One daily brief.** Meetings, email and Slack summarised into a single morning digest, searchable with citations.

7.3 MVP Scope

Ships in v1 (MVP)	Deferred to v2+
Zoom, Meet and Teams capture (bot + desktop)	Webex, in-person mobile capture
Summaries, transcripts, action items	Speaker coaching and sentiment analytics
Video playback and AI highlights	Agentic email replies and scheduling
Ask Brevio search with citations	CRM write-back (Salesforce, HubSpot)
Gmail and Slack daily brief	Outlook, Teams chat
Notion, Asana and Jira task sync	HIPAA, SCIM, custom retention

Table 6: MVP scope

Coaching analytics are deferred on purpose: reviews show sentiment scoring is the feature most likely to misfire and erode trust.

8. Content Strategy

Every line of copy answers the two objections the research surfaced: “is it worth it?” (value) and “can I trust it?” (control). Value leads, and trust closes the sale.

8.1 Audience and Voice

Primary audience: knowledge workers in back-to-back meetings, including managers, sales reps, product teams and founders. **Secondary audience:** the IT or operations lead who must approve a tool that touches calendars and email.

Voice: calm, plain and confident, with short sentences, concrete verbs and no AI hype words such as “revolutionary” or “supercharge”.

8.2 Message Hierarchy

1. **Headline:** Know what happened in every meeting. Without the uninvited bot.
2. **Subhead:** Brevio turns meetings, emails and Slack threads into summaries, searchable transcripts, video highlights and action items. It joins only when you say so.
3. **Proof:** product preview, platform names and trust signals (GDPR, no training on your data).
4. **Close:** Start free, with no credit card and no bot surprises.

8.3 Product Description

Brevio is an AI assistant for the conversations that run your work. It records and transcribes your Zoom, Google Meet and Teams calls, then delivers a clean summary, decisions, action items and a video recap with highlight clips minutes after you hang up. A daily brief condenses your inbox and Slack, and Ask Brevio answers any question across all of it with a link to the exact moment. Unlike other notetakers, Brevio asks before it joins and lets every attendee opt out.

8.4 Key Features and User Benefits

Feature	What the user gets
Smart Summaries	Decisions, next steps and open questions in 2 minutes instead of a 60-minute replay
Transcripts + Playback	Speaker-labelled transcript synced to video, included from the Pro plan
AI Highlights	Auto-cut clips of key moments to share with people who missed the call

Feature	What the user gets
Ask Brevio	Answers across meetings, email and Slack, each linked to its source
Daily Brief	One morning digest of yesterday's meetings, inbox and channels
Action-item sync	Tasks pushed to Notion, Asana or Jira with owners and due dates
Consent Controls	Host approval, in-meeting announcement, one-click opt-out for every attendee

Table 7: Brevio features and user benefits

8.5 Use Case Scenarios

- **Sales:** a rep finishes a discovery call; Brevio logs pain points, budget and next steps and drafts the follow-up email.
- **Product teams:** a PM searches “why did we cut offline mode?” and gets the decision, the meeting and the 40-second clip.
- **Managers:** a team lead back from leave reads one Daily Brief instead of 200 unread messages.
- **Recruiting:** interviewers get structured notes per candidate without typing during the interview.

8.6 Calls to Action

- **Primary: Start free.** 10 meetings a month, no credit card; repeated in the hero, pricing and final band.
- **Secondary: See how it works.** For visitors not yet ready to connect a calendar.
- **Sales-assist: Request a demo.** A contact form for teams evaluating the Business plan.

Testimonials on the page are labelled illustrative and must be replaced with verified beta-user quotes before launch.

9. Landing Page Design Decisions

The page sells value in the first screen and trust in the middle, because the research shows trust is where Read AI loses users.

9.1 Page Structure

#	Section	Job on the page	Research link
1	Hero + report mock	Show the output, not a stock illustration; consent chip visible immediately	Users value report quality most
2	Platform strip	Answer “does it work with my tools?” at a glance	Integration gaps are a top G2 complaint
3	Features grid	Seven features grouped by size of benefit; Ask Brevio shown as a real Q&A	Read AI's USP is cross-channel search
4	How it works	Three steps, with “joins none of them yet” in step 1	Setup speed is a top praise
5	Consent band (dark)	The differentiator gets the strongest visual weight on the page	Trustpilot 1.3/5 driven by auto-join
6	Use-case cards	Four persona cards side by side, so each reader finds their scenario at a glance	Four target personas
7	Testimonials	Social proof on time saved and trust; labelled illustrative	Required section
8	Pricing	Playback in Pro is the price argument; annual and monthly prices shown together	Read AI gates playback at $22.50
9	FAQ	Pre-empt the five objections a buyer or IT lead raises	Privacy and data-training concerns
10	Contact form + final CTA	Capture sales-assist leads; repeat the primary CTA	Required section

Table 8: Landing page structure and rationale

9.2 Visual System

- **Highlighter motif.** A yellow marker (#FFD84D) highlights the key phrase in the headline and the transcript, echoing the product's highlights feature. It is used sparingly so it always means “this matters”.
- **Colour.** Deep pine (#0E3B34) signals trust and calm and avoids the purple-gradient look common to AI tools. Neutrals are tinted green for cohesion.

- **Typography.** Bricolage Grotesque for headlines, Instrument Sans for body text and JetBrains Mono for timestamps and labels, referencing transcripts. All three are Google Fonts available in Webflow.
- **Layout.** A 1160 px container with cards only where content is a discrete object. Every section stacks to one column at tablet width (991 px) and below.

9.3 Webflow Implementation

- Built entirely from native Webflow elements and classes, with a native Webflow Form Block for the contact form; no custom code is used.
- Classes are named by role (hero-grid, card-half, plan-featured, form-input) and reused across sections, so other team members can find and edit them.
- Static where it matters for an MVP: use cases are four persona cards, pricing shows the annual price with the monthly price beneath, and FAQ answers are always visible. Tabs, a billing toggle and collapsing FAQs are planned for v2.
- Form submissions go to Webflow Forms and can be routed to HubSpot or Slack through Zapier.

9.4 Conversion Choices

One primary call to action (“Start free”) is repeated three times, “no card needed” sits next to every free call to action, and the contact form is framed as a 20-minute walkthrough rather than “contact sales”.

10. Success Metrics and Next Steps

The landing page is an experiment: its job is to test whether “consent-first” converts better than “more features”. The targets below are starting hypotheses to calibrate after the first 1,000 visitors.

10.1 Success Metrics

Metric	Definition	Starting target
Visitor-to-signup rate	“Start free” clicks that complete signup / unique visitors	4%
Demo request rate	Contact form submissions / unique visitors	1%
Pricing engagement	Visitors who scroll to pricing / unique visitors	35%
Consent section reach	Visitors who reach the privacy band / unique visitors	60%
Activation	Signups who record a first meeting within 7 days	40%

Table 9: Success metrics and starting targets

10.2 Next Steps

1. A/B test the hero: consent-led headline vs. time-saved headline.
2. Recruit 10 beta users from sales and consulting teams; replace illustrative testimonials with verified quotes.
3. Run 5 usability sessions on the page and check whether visitors understand “bot-free capture” without help.
4. Add Webflow analytics events on each call to action and the contact form.
5. Validate pricing with a van Westendorp survey among 50 target users.
